Workflow EHR to Further Safety, Quality and Efficiency of Healthcare Delivery

CLEVELAND, Feb. 8 -- Today, Workflow.com, a leading provider of clinical software solutions used by physician practices, announced that Indiana University Health Center has chosen the Workflow EHR (electronic health record) system to provide point-of-care clinical automation for the group's 29 providers.

"Indiana University Health Center providers are focused on protecting patient safety and delivering the highest quality care," said Hugh Jessop, Director of Indiana University Health Center. "We chose the Workflow EHR because we believe it will enhance patient care, improve patient safety, cut costs and boost efficiency by automating clinical tasks, improving connectivity between departments and giving physicians the ability to instantly retrieve patient health records whenever and wherever they are needed."

Workflow EHR is a fully customizable system that allows healthcare providers to securely and efficiently manage patient documentation. Through its exclusive HyperForms(TM) technology, Workflow EHR converts the physician's own paper-based forms into a digital format. Patient data, such as treatment notes and prescription orders, can be entered via handwriting, typed text, or dictation. By capturing the information directly onto the digital record, healthcare providers eliminate duplicate work and ensure accuracy. In addition, Workflow EHR can be integrated with any existing practice management system, a benefit that Indiana University Health Center plans to leverage.

"We are excited that Indiana University Health Center has chosen to partner with Workflow.com to enhance their ability to deliver of high-quality care to the patients and communities they serve," said Packy Hyland, Chief Executive Officer of Workflow.com. "We have worked hard to come up with a revolutionary, yet usable system and Indiana University Health Center's decision to use our solution confirms that we have been able to accomplish this."

The Indiana University Health Center is part of Indiana University, which comprises eight campuses, including the residential campus at Bloomington, the urban campus at Indianapolis, and six regional campuses located in communities throughout the state. The Bloomington campus of Indiana University is home to nearly 38,000 students and world-class facilities and resources.

About Indiana University Health Center

The Indiana University Health Center provides comprehensive health services to meet the medical and psychological needs of IU-Bloomington students. Services available are: A full-service appointment and walk-in medical clinic, a pharmacy, a laboratory, X-rays, an eye clinic, women's health services, allergy clinic, immunizations, travel clinic, physical therapy, Counseling and Psychological Services (CaPS), and Sexual Assault Crisis Services (SACS). Health and Wellness Education also sponsors programs on a variety of health-related topics and maintains a resource center. In addition to general patient services, the IU Health Center is responsible for public health on the Bloomington campus.

About Workflow.com

Workflow.com is a leading provider of clinical software, connectivity and information solutions to physicians and physician practices. The Workflow EHR system allows doctors to implement a

custom electronic health record, e- prescribing and document imaging solution in their practices that is based upon their current paper-based forms. By doing so, physicians can increase the quality time spent with their patients by shifting time spent typing at computers to time treating patients.
