

Toledo Cardiology Consultants Implements workflow EHR for Electronic Health Record and Paperless office

Toledo-Area Physician Group Utilizes Electronic Health Record to Aid Report Generation, Mitigate Risk and Connect Physicians Across Multiple Locations

TOLEDO, OH – April 17, 2006 – Workflow.com, a leading provider of easy-to-use clinical software, connectivity and information solutions that physicians use to improve patient care, announced today that Toledo Cardiology Consultants has selected Workflow EHR Electronic Health Record to automate and connect the group's five providers.

"For a physician group of our size to grow and remain financially stable, we simply must move forward with electronic health records," said Ameer Kabour, MD, Chief Executive Officer of the cardiology group, which serves more than 100,000 patients in northwestern Ohio and southern Michigan each year. "Workflow EHR is the only way we can provide physicians with the latest patient information at the point of care, as Toledo Cardiology Consultants will be able to access the web-based technology from any of our physician offices or from a remote location."

Workflow EHR will enable physicians and other healthcare professionals across 4 offices to automate common clinical activities such as prescribing medications, ordering lab tests, documenting patient visits, and making referrals electronically. Most importantly, Workflow EHR automates reporting for cardiology testing and interfaces seamlessly with other office technology.

"We need to be able to have access to accurate and reliable patient information at the time we need it and the place we need it," said Ameer Kabour, MD. "With our multiple locations, it's a real-world problem that the paper chart may not be there when it's needed. The electronic health record creates improved continuity of care between the office, the hospital and physicians on-call at home."

"Dr. Kabour and Toledo Cardiology Consultants are visionary in their adoption and use of technology in order to maintain the high standards within their practice," said Jay Volk, President of Workflow.com. "Their commitment to patient care is evident, and they required an electronic health record that matched that commitment."

About Toledo Cardiology Consultants

The physicians of Toledo Cardiology Consultants are "committed to cardiac excellence" in the diagnosis and prevention of cardiovascular disease. They offer a large array of cardiac services in several offices throughout the Toledo and southern Michigan areas. The providers and staff of Toledo Cardiology Consultants strive to provide considerate, personal care in a timely fashion.

About Workflow.com

Workflow.com is a leading provider of clinical software, connectivity and information solutions to physicians and physician practices. Workflow EHR allows doctors to implement a custom electronic health record, e-prescribing and document imaging solution in their practices that is based upon their current paper-based forms. By doing so, physicians can increase the quality time spent with their patients by shifting time spent typing at computers to time treating patients. For more information on this solution and how workflow.com can help you, visit www.workflow.com.
