Workflow.com® Announces Release of workflowPM™ version 3.4

Cleveland, Ohio – Workflow.com, a leading provider of health information technology that dramatically improves the practice of medicine for both providers and patients, today announced the release of workflowPM version 3.4.

WorkflowPM is a comprehensive medical office management system designed for proactively managed practices. Combining ease of use with outstanding flexibility, workflowPM includes data-entry screens designed to speed patient registration, charge entry, and payment entry.

Workflow.com solutions improve the delivery of safe, cost-effective, high-quality care by automating common tasks such as prescribing and refilling medications, ordering and viewing tests, and documenting care.

WorkflowPM version 3.4 has many new features specifically designed to better meet our customers' needs by cutting costs, increasing operational efficiencies, streamlining processes, and ultimately enhancing patient outcomes.

Summary of New Features – workflowPM version 3.4

workflowEHR™ Integration: The integration enables a practice's clinical and business operations to work hand-in-hand for better communication and improved accuracy.

ERA: Automatic import of electronic remittance advice from the payor reduces the need for manual posting of claim payments and reconciling patient accounts, thereby saving our customers time and money.

Demographic Entry: Now, when users open a patient's account in the demographic entry screen, warnings will appear for comments, outstanding account balances, unused credits, and service limits. In addition, the screen has taken on a new look and feel to enhance the data entry process.

Daysheet: Supervisor users will now have the ability to un-post and re-post daysheets using an effective date. Rather than using adjustments to correct data entry errors, users can simply un-post the daysheet to unlock the data, correct the errors, and re-post. It's that simple!

Enhanced Reporting: With more robust reporting capabilities for user productivity, the reports in workflowPM are dynamic management tools designed to help our customers analyze and assess the state of their practice.

Improved Account Payment Process: The account payment process is now more efficient and will help decrease our customers' data entry time. Users will be able to load charges directly from account statements. In addition, the Automatic Distribution feature will expedite payment entry.

About Workflow.com

workflow.com is an innovative software company that has created and supports complete solutions for ambulatory care, including electronic health records (EHR), practice management (PM), document imaging, patient scheduling, messaging, billing services and clinical workflow.
